DaWabit ($WABIT) White Paper

1. Introduction 🌅

DaWabit ($WABIT) is a rabbit-themed memecoin born at the intersection of irreverent humor and intelligent tokenomics. Inspired by the timeless wit of Bugs Bunny, DaWabit isn't just another meme — it's a movement. With built-in deflationary mechanics, fair launch ethics, and a long-term vision anchored by Web3 gaming, DaWabit hops ahead of the herd.

2. Tokenomics ⚙️

Total Supply: 333 Trillion $WABIT

The total supply of $WABIT was pre-divided into three equal tranches of 111 trillion tokens:

1. *111 Trillion Burned*
 - Sent permanently to the burn wallet 0xdead42069... pre-launch.
 - [View transaction]
https://etherscan.io/tx/0x683669b88eb111658cc17ae373f0d3a702c8d3844312c7df58f2fa7341277f82

2. *111 Trillion Paired with ETH*
 - Locked in liquidity to support initial trading and ecosystem health.
 - [View transaction]
https://etherscan.io/tx/0x29d615bbe0e08e5a90bd867bf22adcf73bcab0103e46fada489795b6c90a62ef

3. *111 Trillion Paired with USDT*
 - Created a parallel liquidity pool to foster price symmetry and arbitrage opportunities.
 - [View transaction]
https://etherscan.io/tx/0xe4d767324f2522caf8ef25305ce80902fec269f1e926c4c0ccad7e21907a5416

Why Split Liquidity?
 - Cross-pool arbitrage
 - Resilient price floors
 - Broader access
- More burns when bots trade

🥕

3. Deflationary Mechanics🔥

Every on-chain transaction incurs a 0.01% burn fee, automatically sent to the burn wallet:
0xdEAD00000000000000004206942069420694206942069

This makes $WABIT <u>truly</u> deflationary🔥:
 - Supply permanently decreases with every transaction 📉
 - Mimics Bitcoin's mathematical scarcity 🏦
 - Reinforced by numerology and thematic consistency 🌌

4. Contract Features 🚀

Custom Contract Address:

0x5857CF3FD35D1FB4EC56151B5Dcff289e7BE8000

Computational Optimization by Design:

- The trailing zeros in the deployed contract address are not cosmetic — they are an intentional part of the design to optimize gas efficiency and execution cost.
- In the EVM, addresses are stored as 20-byte values. When performing operations like keccak256, abi.encode, or low-level calldata encoding, addresses with trailing zero bytes require less computation, especially in inline assembly.
- This benefit is small in isolation but compounds with frequent function calls like transfer, which are core to $WABIT's burn logic.
- The optimized address contributes to a leaner, faster execution footprint, in line with the project's minimalist ethos.

Verifiable & Recognizable (Secondary Benefit):

The ...8000 suffix makes the contract address:

- *Easier to verify on-chain.*
- *Distinctive, helping users avoid spoofed or lookalike contracts.*

Reentrancy Guard + Cooldown Timer:

- Reentrancy Guard: Protects against recursive call exploits by ensuring that no function can be re-entered during execution. Shields transfer logic from common DeFi vulnerabilities.
- Cooldown Timer (30 seconds): Designed to deter MEV bots and sandwich attacks. Encourages natural trading flow, protecting user experience.

Minimalist Architecture:

- No Proxies: The contract is not upgradeable and contains all logic on deployment. Ensures code immutability and long-term trust.
- No Minting: Fixed supply is hardcoded at launch. Eliminates future inflation risks and pairs naturally with the burn mechanism to enforce deflation.

Contract Ownership Renounced:

- ***Custom Factory Deployer contract renounced***
  - https://etherscan.io/tx/0xf27079986bd1d363ff353bfc92632dcb0ed20f0547065541463e75c6e2e94f55
  - https://etherscan.io/tx/0xd200a461b5ef34e1d352d0cc0187aa1ae6e2d7fd6ae96c93b50050d551b3de83
- ***DaWabit contract ownership renounced***

5. Liquidity Locked 🔒

All Liquidity Pool (LP) tokens from the initial launch have been burned to the same burn address: 0xdEAD000000000000000042069420694206942069

- [LP Token Burn 1] 🔥

6. Lore & Symbolism 🐰

A Legacy Passed Down
DaWabit draws inspiration from the cultural icon **Bugs Bunny**, reimagined through a modern lens. In the lore of the project, King Bugs leaves his digital inheritance to his great grand-nephew — a new kind of bunny rabbit, DaWabit, born on-chain and built for the memecoin era.

🐰

🥕

Symbolism Reversed
Where others chase the "white rabbit," DaWabit **is the black rabbit** — a symbol of inversion, independence, and redefined meaning. In popular culture and occult tradition, the white rabbit is often a guide into hidden knowledge or illusion (e.g., *The Matrix*, *Alice in Wonderland*). DaWabit flips this archetype:

- The project's logo is a **black bunny silhouette**, outlined in white — a direct inversion of traditional rabbit symbolism.

- In the contract code, the comment **"follow da black wabit…"** subverts the phrase "follow the white rabbit," suggesting a new path: not toward secrecy, but toward transparency, irreverence, and self-determination.

Numerology & Culture
The launch date — **06/09/2024** — aligns with crypto's tradition of cultural timestamps, akin to how $PEPE launched on **4/20/23**. The use of **69**, much like **420**, taps into numerological and memetic resonance. Even the burn wallet address — `0xdEAD...42069` — was chosen intentionally, tying together numerology, irreverent humor, and burn-based tokenomics.

'DaWabit': Meme, Message, Movement
More than a token mascot, DaWabit is a decentralized symbol — a signal to those who reject copy-paste forks, shallow hype, and influencer pump cycles. It's about building culture, not just chasing charts.

7. Fair Launch 🏁

- No Team Tokens
- Community-Owned
- Anonymous Developer

(cont'd..)

🥕

🐇

8. Roadmap 🚧

Phase 1: Fair Launch ✅
 - Deploy contract, Burn 1/3 supply, Seed liquidity, Burn LP tokens

Phase 2: Liquidity Expansion 🏗️
 - Add DEX liquidity, compound deflation, increase arbitrage

Phase 3: Secondary Token Launch 🏗️
 - Paired with $WABIT, powers AI NFTs, burns $WABIT

Phase 4: MMORPG Launch 🕰️
 - Web3 F2P/P2E game, PvE, PvP, crafting, 2 server types, exclusive NFT passes

9. Sustainability & Ecosystem Vision ♻️

- More users → more transactions → more burns
 - More pools → more arbitrage → more burns
 - Game + NFTs → more utility → deeper engagement → more burns
- More burns → stronger price floor → greater market resilience

10. Closing Thoughts 🌥️

$WABIT is what happens when meme culture meets real mechanics. Born deflationary, launched fairly, and powered by a game-first vision — it's time to follow DaWabit.
